metu Suggested Purchase Stages

There are four suggested stages towards a complete metu acoustic panel application, they are:

Stage One is addressing the 1st order reflections of the left, center (if applicable) and right front channels speakers on the side, front walls and ceiling (see 1st Order Reflection Instructions on reverse) with 2'x4' metu Wall Panels.

Stage Two adds metu Corner Traps in the front lower corners.

Stage Three adds another set of Corner Traps in the upper front corners.

Stage Four adds Corner Traps in the lower rear corners, and for surround sound systems, adds (4) 2'x2' metu diffusers at the 1st order reflection location of the surround speakers on the side walls and ceiling.

If needed: Additional metu Corner Traps in the upper rear corners will further reduce reverberation times and/or problematic room modes if needed.
